COVIDWORLD app: current data and visualizations for SARS-CoV2 pandemic

SARSCoV2 is the cause of the COVID19 pandemic, which has been perturbing the normal functioning of human civilization since the final trimester of 2019. Here we present a [user friendly interface](https://community.wolfram.com/groups/-/m/t/2473065) [<https://community.wolfram.com/groups/-/m/t/2473065>] that automatically fetches up-to-date data from the GitHub repository of the World Health Organization and uses it to represent the current state of the pandemic around the world and show how it progressed from its beginnings until now. We also implement user friendly functionality to fetch and represent data for Spanish autonomic regions and provinces. Finally, we provide an interface to compare any two regions in the data set.
